# Contents

<b>I. Stochastic Dynamics of Particles</b>	<b>1</b>
<b>1. Elementary Stochastic Processes</b>	<b>3</b>
1.1. Random walks and sums of random variables . . . . .	3
1.1.1. Simple random walk (Bernoulli process) . . . . .	4
1.1.2. Gaussian random walk . . . . .	9
1.1.3. Random walk and the gambler's ruin . . . . .	12
1.2. Conceptual models of cell size regulation . . . . .	18
1.2.1. Biological background . . . . .	18
1.2.2. Stochastic maps for cell size control . . . . .	18
1.3. Poisson process and stochastic simulations . . . . .	30
1.3.1. Waiting time distribution . . . . .	30
1.3.2. Stochastic simulation algorithms . . . . .	32
1.3.3. Method of generating functions . . . . .	34
1.3.4. Molecular motors . . . . .	38
1.4. Population dynamics and Gillespie's algorithm . . . . .	39
1.4.1. Linear death process . . . . .	39
1.4.2. The Lotka-Volterra process . . . . .	44
1.5. Stochastic dynamics of chemical bonds . . . . .	48
1.5.1. Stability of simple chemical bonds . . . . .	48
1.5.2. Dynamics of clusters of parallel bonds . . . . .	52
1.6. Simple model for gene expression . . . . .	60
1.6.1. Messenger RNA dynamics . . . . .	61
1.6.2. Protein dynamics . . . . .	63
1.6.3. Master equation for gene expression . . . . .	64
1.7. Random walk and diffusion equation . . . . .	70
1.7.1. Diffusion approximation . . . . .	70
1.7.2. Stochastic simulations . . . . .	72

<b>2. Fundamental Equations for Markov Processes</b>	<b>75</b>
2.1. Chapman-Kolmogorov equation . . . . .	75
2.2. Markov processes with a discrete state space . . . . .	79
2.2.1. Forward and backward master equation . . . . .	79
2.2.2. General properties of master equations . . . . .	84
2.2.3. Reversible processes and detailed balance . . . . .	92
2.2.4. Markov chain Monte Carlo methods . . . . .	116
2.3. Markov processes with a continuous state space . . . . .	119
2.3.1. Differential Chapman-Kolmogorov equation . . . . .	123
2.3.2. First passage time problems . . . . .	130
2.3.3. Elementary examples . . . . .	135
<b>3. Stochastic Dynamics of Particles</b>	<b>151</b>
3.1. Introduction . . . . .	151
3.2. Brownian motion of a single particle . . . . .	153
3.2.1. Langevin equation . . . . .	153
3.2.2. Fokker-Planck equation . . . . .	161
3.2.3. Overdamped Langevin dynamics . . . . .	164
3.2.4. Diffusion in phase-space: Klein-Kramers equation . . . . .	165
3.2.5. Path integral formulation . . . . .	170
3.3. Stochastic differential equations . . . . .	178
3.3.1. Brownian dynamics simulations of the Wiener process .	178
3.3.2. Langevin equations with multiplicative noise . . . . .	182
3.3.3. Stochastic integrals for Wiener increments . . . . .	184
3.4. Diffusion in inhomogeneous media . . . . .	194
3.5. Path integrals for systems with multiplicative noise . . . . .	200
3.6. Interacting Brownian particles . . . . .	206
<b>4. Stochastic Dynamics for Discrete State Spaces</b>	<b>215</b>
4.1. Fluctuation-dissipation relations . . . . .	216
4.2. Kramers-Moyal expansion . . . . .	225
4.2.1. Elementary examples . . . . .	227
4.2.2. Demographic noise in population dynamics . . . . .	229
4.3. Spectral method for the linear death process . . . . .	240

4.4. Path integrals for well-mixed systems . . . . .	243
4.4.1. Coherent state path integral . . . . .	244
4.4.2. Kramers-Moyal path integral . . . . .	251
4.4.3. Cole-Hopf transformation . . . . .	256
4.5. Path integrals for spatially extended systems . . . . .	257
4.5.1. Diffusion-reaction systems . . . . .	260
4.5.2. Interacting particle systems . . . . .	263
<b>5. Fokker-Planck-Equations</b>	<b>267</b>
5.1. Boundary conditions . . . . .	268
5.2. Spectral analysis of the Smoluchowski equation . . . . .	270
5.2.1. The Ornstein-Uhlenbeck process . . . . .	270
5.2.2. Expansion in eigenfunctions . . . . .	272
5.2.3. Diffusion on a unit sphere . . . . .	278
5.3. Brownian ratchets . . . . .	282
5.4. Chemical kinetics models of molecular motors . . . . .	292
5.4.1. Introduction . . . . .	292
5.4.2. Multi-state models for kinesin motors . . . . .	292
5.4.3. Sliding filament theory . . . . .	293
5.5. First passage times problems . . . . .	300
5.5.1. Two absorbing barriers . . . . .	300
5.5.2. One absorbing and one reflecting barrier . . . . .	304
5.5.3. Arrhenius law: escape over a potential barrier . . . . .	306
<b>II. Stochastic Dynamics of Fields</b>	<b>311</b>
<b>6. Stochastic dynamics close to thermal equilibrium</b>	<b>313</b>
6.1. Introduction . . . . .	313
6.2. Onsager coefficients and symmetry relations . . . . .	314
6.3. Relaxational dynamics . . . . .	323
6.3.1. Relaxational dynamics for non-conserved fields . . . . .	325
6.3.2. Relaxational dynamics for conserved fields . . . . .	335
6.4. Dynamics of hydrodynamic systems . . . . .	337
6.4.1. One-component (Newtonian) fluids . . . . .	337

6.4.2. Brownian particles suspended in a fluid (model H) . . . . .	348
6.5. Dynamic functionals for field theories with additive noise . . . . .	350
6.5.1. Onsager-Machlup functional . . . . .	350
6.5.2. Detailed balance and time reversal invariance . . . . .	354
6.5.3. Janssen-de Dominicis response functional . . . . .	359
6.5.4. Fluctuation-dissipation relation . . . . .	361
6.5.5. Non-equilibrium work and fluctuation theorems . . . . .	363
<b>7. Kardar-Parisi-Zhang Equation</b>	<b>371</b>
7.1. Introduction: Growth models . . . . .	371
7.2. KPZ and Burgers equation . . . . .	374
7.3. Directed polymers in random media . . . . .	376
7.4. One-dimensional KPZ equation . . . . .	379
7.5. Higher-dimensional KPZ equation . . . . .	390
<b>III. Appendices</b>	<b>399</b>
<b>A. Basic Probability Concepts</b>	<b>401</b>
A.1. Definitions and axioms . . . . .	401
A.2. Random variables . . . . .	403
A.3. Characterisation of probability distributions . . . . .	406
<b>B. Gaussian Integrals</b>	<b>415</b>
B.1. Calculation of Gaussian integrals . . . . .	415
B.2. Generating functions . . . . .	416
B.3. Wick's theorem . . . . .	417
<b>C. Functional derivatives and integrals</b>	<b>419</b>
C.1. Functional derivatives . . . . .	419
C.2. Functional integrals . . . . .	420
<b>D. Fock space representation of master equations</b>	<b>427</b>
D.1. Operator algebra and Fock states . . . . .	428
D.2. General features of the Fock space formalism . . . . .	433
D.3. Coherent states . . . . .	437

<b>E. Coherent state path integral formulation</b>	<b>439</b>
E.1. Coherent states . . . . .	439
E.2. Construction of the path integral . . . . .	441
